

FROM MA'S DESK

Seasons Greeting from all at JAM Software.

It was wonderful meeting many users at M.U.M. 2006 in Sydney & Melbourne last October. Great reports have been received from several users regarding the implementation of SMS patient reminders & other functions that were demonstrated there.

The Dec 2006 releases incorporate several user suggestions following M.U.M.2006 as

Major CustomDB upgrade with new MED Formz v1629

New functions include
 * New **Visit / Operation / Episode**, with **Previous, Next, Save & Close Buttons**.

* **Open MEDFormz Button**

Call JAM to book a time to have these functions installed into your Custom DB.

A new version of **MEDO&R** will be released via the web site before Xmas- This version can be configured to know where the results folder is eliminating users needing to find & point to the results folder with every import

JAM MIMS Subscribers were mailed in early Dec by CD

well as all the new function shown there & are available for download from www.jamsoft.com.au. Early 2007 will see the on line implementation for inpatient billing to health funds as well as further developments cardiology & neurology are already booked. If you have a custom MacMED system you can be assured that we offer you full conversion and help in customising your new MED4i system. All you have to do is call us to book some time

Important Please Note :::::

The password for MEDSubscribers on JAMSoft.com.au is due to change at midnight on 20th Dec. Two stickers are included in this mail out to place on your desk together with the new download instructions for future reference.

STREAMLINE YOUR PRACTICE WITH MED4i

Just the way you want it!

Attention surgeons—now you can keep your very own surgical database with your choice of data sets, your own query sets, your own styles & formats of reports—**customisable** to your needs & **linked** to your patient database in MED Billing! **No double entry of names!**

MED CustomDB comes with a sample surgical audit database that can be **self-customised** or—for a customization fee—**JAM can customise it just the way you want** (subject to analysis of your requirements). This sample contains the most common fields such as presenting symptoms, co-morbidity, procedures, complications etc. The fields can also be set to automatically learn as you go.

Take Your Patient Documents and database with you on your **laptop**, use it in **theatre or out of office visits** and **synchronise** them with your server when you return to the office.

Use in conjunction with a **Pegasus® Electronic Pen** Device to draw electronic diagrams or capture patient signatures directly onto consent forms.

SMS Appointment Reminders to all patients with mobile phones with one click. Save hours of staff time on the phone and as has been reported, your patients will love it

Save **TIME** and **MONEY** by **Dictating directly into MEDFormz** from your desk at the end of a consulting session. We recommend integration **Dragon® Naturally Speaking** professional edition with MED4i. Simply click on the patient in your Worklist dictate using the supplied noise cancelling head set or many of the popular brand hand recorders. Intel Mac users require special microphone available from JAM.

SAMPLE MED4i CUSTOMDB

“WHAT DO I NEED TO UPGRADE TO

MED4i?”

1. Intel Mac or PC hardware
2. Windows Operating system. With BootCamp or Parallels for intelMac users
3. For those coming from MacOS9/X will need a data conversion. We require a sample of your files on CD for pre-conversion examination to calculate minimum time & cost.

4. To run paperless, you will require a high-speed document scanner with Sheet feeder. We strongly recommend purchasing a Fujitsu or the cost effective *Avision AV220*.

5. If you plan to have remote sites or want to connect from home, you should consider purchasing a dedicated server. For more than 3 workstations, it is recommended that you have high-performance server such as *Dell PowerEdge* server that comes with automatic tape backup, Harddrive imaging, *Windows Server 2003* to manage large numbers of files and *Terminal Services* licenses for remote access.

Server Solutions
Run applications remotely
Powerful, affordable network engines emphasizing scalability and reliability.

6. For doctors who take electronic notes or review correspondence on screen or wish to draw diagrams or capture patient consent authority electronically, you should consider adding a *Pegasus® NoteTaker* or Tablet PC.

7. If you dictate your letters already why not use *Dragon® Naturally Speaking Professional V9* and speak them into your patient's file. You can activate it from the work List / Diary and then mark it using a diary status for proofing and printing by your staff.

- I want to Upgrade my JAM Software from MEDBilling Windows v3 to MED4i adding
- MED Formz \$500
 - MED O&R (Orders & Results) \$500
